

Ghosh's monic sextic identity

Soumadeep Ghosh

Kolkata, India

Abstract

In this paper, I describe my monic sextic identity.
The paper ends with "The End"

Introduction

The monic sextic satisfies many identities, one of which is my monic identity.
In this paper, I describe my monic sextic identity.

Ghosh's monic sextic identity

When

$$Q \neq 0$$

Ghosh's monic sextic identity is

$$\begin{aligned} x^6 + ax^5 + bx^4 + \left((a - P)(b - aP + P^2 - Q) + PQ + \frac{eQ + fP - af}{Q^2} \right) x^3 + \left((b - aP + P^2 - Q)Q + \frac{f}{Q} + \frac{(a - P)(eQ + fP - af)}{Q^2} \right) x^2 + ex + f \\ = \\ \left(x^4 + Px^3 + (b - aP + P^2 - Q)x^2 + \left(\frac{eQ + fP - af}{Q^2} \right)x + \frac{f}{Q} \right) (x^2 + (a - P)x + Q) \end{aligned}$$
