

Ghosh's monic octic identity

Soumadeep Ghosh

Kolkata, India

Abstract

In this paper, I describe my monic octic identity.
The paper ends with "The End"

Introduction

The monic octic satisfies many identities, one of which is **my monic identity**.
In this paper, I describe my monic octic identity.

Ghosh's monic octic identity

When

$$Q \neq 0$$

Ghosh's monic octic identity is

$$\begin{aligned} x^8 + ax^7 + \left((a-P)P + \frac{f-g}{Q} + Q \right) x^6 + \left(\frac{(a-P)(f-g) + g-h}{Q} + PQ + Q \right) x^5 + \left(f-g + \frac{(a-P)(g-h) + h}{Q} + PQ + Q \right) x^4 + \left(\frac{ah - h(P+Q)}{Q} + f + PQ \right) x^3 + fx^2 + gx + h \\ = \\ \left(x^4 + (a-P)x^3 + Qx^2 + Qx + Q \right) \left(x^4 + Px^3 + \frac{(f-g)}{Q}x^2 + \frac{(g-h)}{Q}x + \frac{h}{Q} \right) \end{aligned}$$
